

Ravindra kumar

Senior Software Engineer (Java)

✉ ravindrakushwahanwg@gmail.com ☎ 7047178936 📍 Noida 🔗 [linkedin.com/in/ravindra156785166](https://www.linkedin.com/in/ravindra156785166)

PROFILE

Highly skilled IT professional with **5.5+ years of experience** as a **Java Developer**, specializing in **micro services architecture**. Proven expertise in building robust applications using Java in the GPS, Insurance, Financial, and E-Commerce domains

SKILLS

- Java 8 & Data Structures | Spring boot | Hibernate & JPA | Microservices | Swagger
- MySQL | PSQL | SQL | Jenkins | AWS | Junit 5 | Mockito | Postman
- Bitbucket | Jira | JavaScript | HTML | CSS | Git | GitHub | WinSCP | Putty | Log4j

PROFESSIONAL EXPERIENCE

Senior Engineer | Onelap Telematics Pvt. LTD

11/2024 – Present
Noida(Hybrid)

- **Architected and optimized Java Spring Boot microservices**, utilizing connection pooling, pagination, batching, indexing, and SQL view creation to achieve up to a **90% reduction in API response latency**.
- **Reduced database storage footprint by 83% (12TB to 2TB)** by implementing daily table partitioning in PostgreSQL and designing an automated lifecycle process to archive positions older than 60 days to AWS S3.
- **Built an automated ETL data recovery pipeline** to extract, download, and re-ingest date-filtered historical position datasets from AWS S3 back into PostgreSQL for auditing and operational reporting.
- **Diagnosed and resolved critical production memory leaks** using Eclipse Memory Analyzer (MAT), while fine-tuning Tomcat thread limits and database connection pools to stabilize high-concurrency performance.
- **Established full-stack observability** using Prometheus and Grafana for real-time microservice monitoring and alerting, maintaining continuous **99.9% system availability and reliability**.
- **Containerized microservices using Docker** across DEV, QA, and PROD environments, standardizing deployment pipelines and executing **Blue/Green database deployments** for zero-downtime PostgreSQL schema updates.
- **Enhanced system security** by implementing JWT, Spring Security, and Basic Authentication across REST endpoints and Spring Boot Actuator, while configuring GitHub branch protection rules to enforce authorized peer-reviewed merges into `main`.
- **Integrated Amazon Multi-Channel Fulfillment (MCF) APIs** into the corporate CRM, automating order fulfillment, multi-channel shipping workflows, and inventory sync.
- **Spearheaded a comprehensive telecom/SIM usage audit**, eliminating redundant data plans and operational inefficiencies to cut monthly recurring telecom bills by **50%**.
- **Collaborated with cross-functional teams** to define RESTful API contracts, resolve high-priority production incidents, and deliver seamless integration between frontend and backend systems.

Specialist - Engineering | SOLV (Standard Chartered Research and Technology India Pvt. LTD.)

12/2023 – 10/2024
Noida(Hybrid)

- Create new SFTP user in AWS transfer family and added restriction on folder only specific user can access.
- Achieved significant reduction in API response **times by 10%** using database joins leading to improve API.
- Added **pagination and sorting** in APIs to manage large dataset, improved data retrieval **efficiency by 20%**.
- Deployed services using Jenkins with tag build strategies and actively monitored **logs in Kubernetes**, ensuring rapid issue resolution.

Java Developer | Nagarro Pvt. LTD.

07/2021 – 12/2023
Gurugram(Hybrid)

- **Researched and proposed** the migration of monolithic architecture to microservices, enhancing scalability and flexibility of application components.
- **Developed** multiple POCs to initiate the migration, including upgrading logging frameworks from Log4j to Log4j2, improving system security and performance.
- **Contributed** to the design and architecture of microservices, enabling smoother workflows and reduced bottlenecks in the application.

- **Wrote** and **executed** complex SQL queries to retrieve and manipulate data, improving backend efficiency **by 20%** and data accessibility for the application.
- **Analyzed** and **debugged** Java code to identify and fix issues, improving application stability and reducing downtime **by 10%**.

PROJECTS

OneLap GPS Tracker

The OneLap GPS Tracker is a vehicle tracking platform that provides **real-time location monitoring**, route history, vehicle status updates, and seamless GPS device communication. It helps improve vehicle security, fleet visibility, and **tracking efficiency**.

OneLap CRM

OneLap CRM is a customer relationship management platform that streamlines lead tracking, customer communication, sales activities, and service operations. It centralizes customer interactions, enabling teams to manage follow-ups, track opportunities, and improve customer support.

Solv B2B Platform

The Solv B2B platform is a web-based application designed with a microservices architecture to **support India's MSME sector** by providing an open and inclusive trade ecosystem. The platform covers the entire value chain, allowing users to assume roles such as master anchor, anchor, and dealer. Key functionalities include onboarding users, uploading invoices, processing payments, and managing financial transactions efficiently.

Insurance Application

Protect the ones people care about most with **easy-to-understand insurance options** that provide **peace of mind** and give you back your **precious time**. Simplified solutions designed to secure your future with confidence and convenience.

EDUCATION

BE(Computer Engg.) | IET, DAVV | 78% | Passout year - 2021

AWARDS

Winner of Smart India Hackathon | MHRD (Govt. Of India)

Finalist of Internal Smart India Hackathon | MHRD (GOVT. Of India)

CERTIFICATES

- Problem Solving - Hacker rank
- Java (Intermediate) - Hackerrank
- SQL - Hackerrank
